# ThreatDefence's SecOps Platform Empowers Healthcare Organization to Safeguard Patient Data and Minimize Cyber Risks

Our client is a large healthcare organization in Australia that provides medical care to thousands of patients daily. The organization handles sensitive patient data, including medical records, personal identification information, and payment details. Cybersecurity is of utmost importance to safeguard this sensitive information and protect patient privacy.

As healthcare organizations continue to digitize and modernize their operations, they are becoming prime targets for cyber attacks. Cybercriminals are increasingly targeting the healthcare sector due to the high value of patient data and the critical nature of healthcare services.

The organization recognized the need for a robust cybersecurity strategy to address the evolving cyber threat landscape and protect their patients' data. They were looking for a cybersecurity provider who could provide extensive coverage across their entire environment and assist them in achieving compliance with relevant regulations.

After evaluating various options, the healthcare organization chose to partner with ThreatDefence. ThreatDefence offered a comprehensive cybersecurity solution that included SIEM platform, real-time threat detection and monitoring, network detection and response, and ongoing security operations.

ThreatDefence implemented its SecOps platform across the organization's environment, providing deep visibility into the network and systems, including the cloud footprint and external perimeter. The healthcare organization's security team now has complete assurance that their sensitive patient data is being protected.

At the beginning of the engagement, ThreatDefence conducted a comprehensive compromise assessment of the healthcare organization's network. The assessment involved a thorough examination of the organization's systems and networks, looking for any signs of compromise or malicious activity. The assessment was critical in identifying any vulnerabilities and providing the organization with an understanding of their security posture.

As it was noted by the Head of Technology: *"We were impressed with how thorough ThreatDefence was in their compromise assessment. They provided us with a detailed report on the state of our environment and identified any potential risks that needed to be addressed. It was reassuring to know that they conducted a thorough analysis and gave us the confidence that our network was free from any compromise."*

ThreatDefence's SecOps platform continues providing ongoing support to the organization, ensuring that all new technologies and systems are always covered and new cyber threats are proactively addressed. *"Our partnership with ThreatDefence has enabled us to achieve a higher level of security maturity, providing us with peace of mind knowing that our sensitive data is being protected 24x7."* said the Head of Technology.

*ThreatDefence's SecOps Platform has been crucial in ensuring that our sensitive data remains secure, while also allowing us to innovate and expand our digital capabilities. Their approach to security operations has given us peace of mind knowing that our technology footprint is being constantly monitored, and any potential threats are quickly detected and mitigated."*

## ABOUT THREATDEFENCE

ThreatDefence provides innovative Security Operations and cyber defense solutions to MSPs and Enterprises. Our SecOps Platform is designed to assist businesses of all sizes in implementing world-class detection and response, utilizing all available data sources, whether it be within their network, on the Dark Web, or concealed deep within their supply chain. We value open ecosystems and seamlessly integrate with any and all threat intelligence feeds and log sources, delivering immediate actionable security insights.
